

Title:

No webcam on teams

Summary/ Intro:

With the new laptop model like L14, P15 and Latitude 5410 people don't realize it has the camera switch to close and open the camera. If you can look close to your camera (top part on the Lenovo and left side on dell) you will see a camera switch which moves side to side, it has an important role on your camera

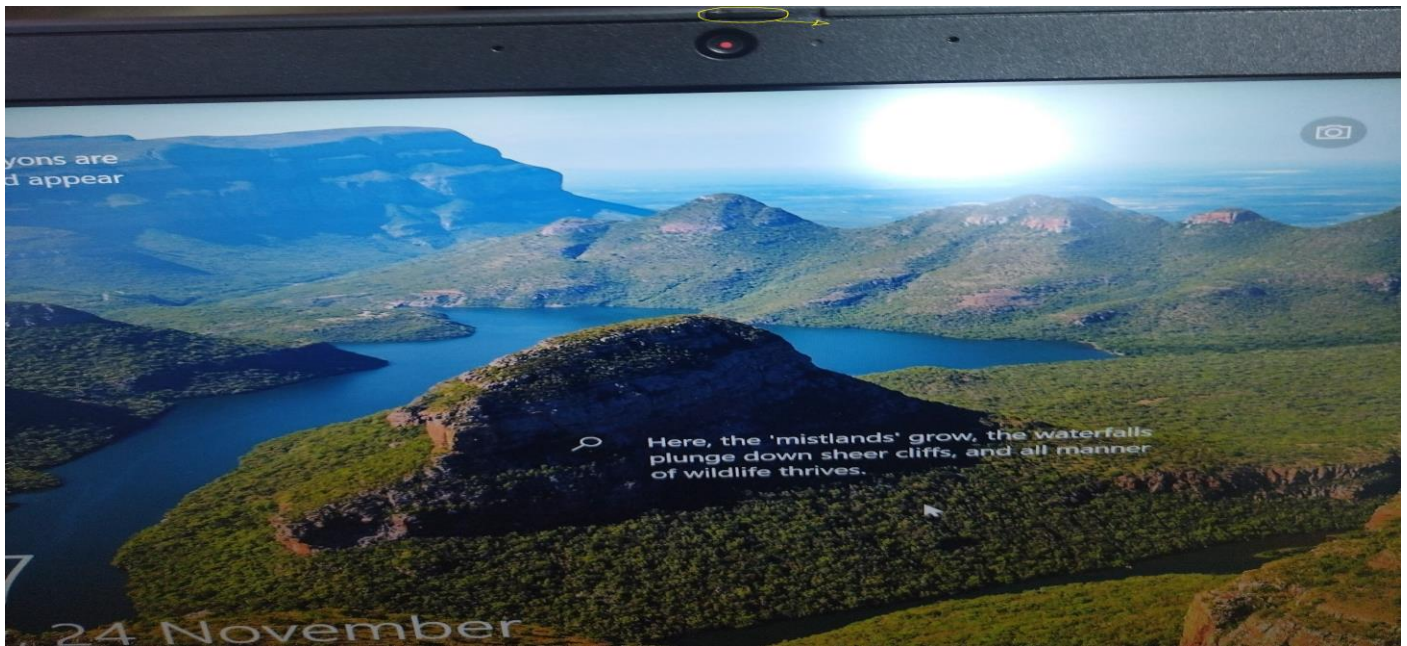

Steps:

Step 1... When on teams make sure you press the camera button to switch on your video

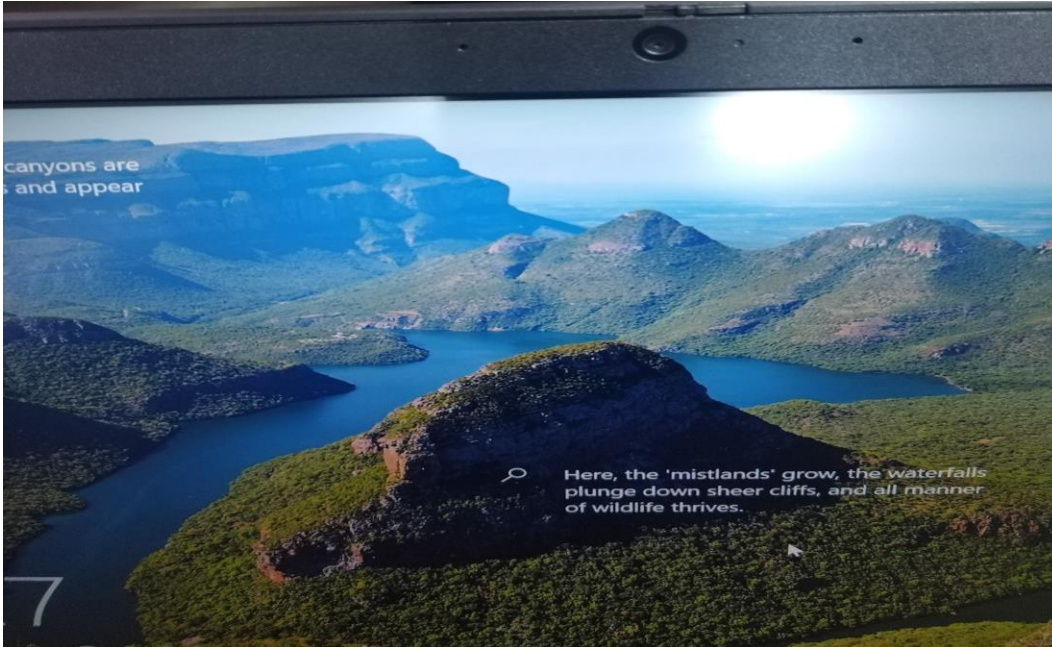

Step 2: if your camera does not come up then you must verify if the camera is on or off, if you see some red spot on your camera then it means it is off, you need to move the circled part to your right

Conclusion (Optional):

Always make sure that your camera is on before attempting to switch on webcam, this is how it looks like when the camera is on
