

Title:

How to setup 3G network

Summary/ Intro:

This article is to show users how to setup 3G card on windows 10 laptop.

Steps:

Step 1

Switch on your machine and login, use the pin to pull out the sim slot at the left or back side of the laptop, the resent Lenovo L14 gen 3 and dell laptops the sim slot is at back, but most Lenovo laptops the slots are at the left side of the laptop.

Accept Lenovo P52 you must remove the battery to insert the sim card.

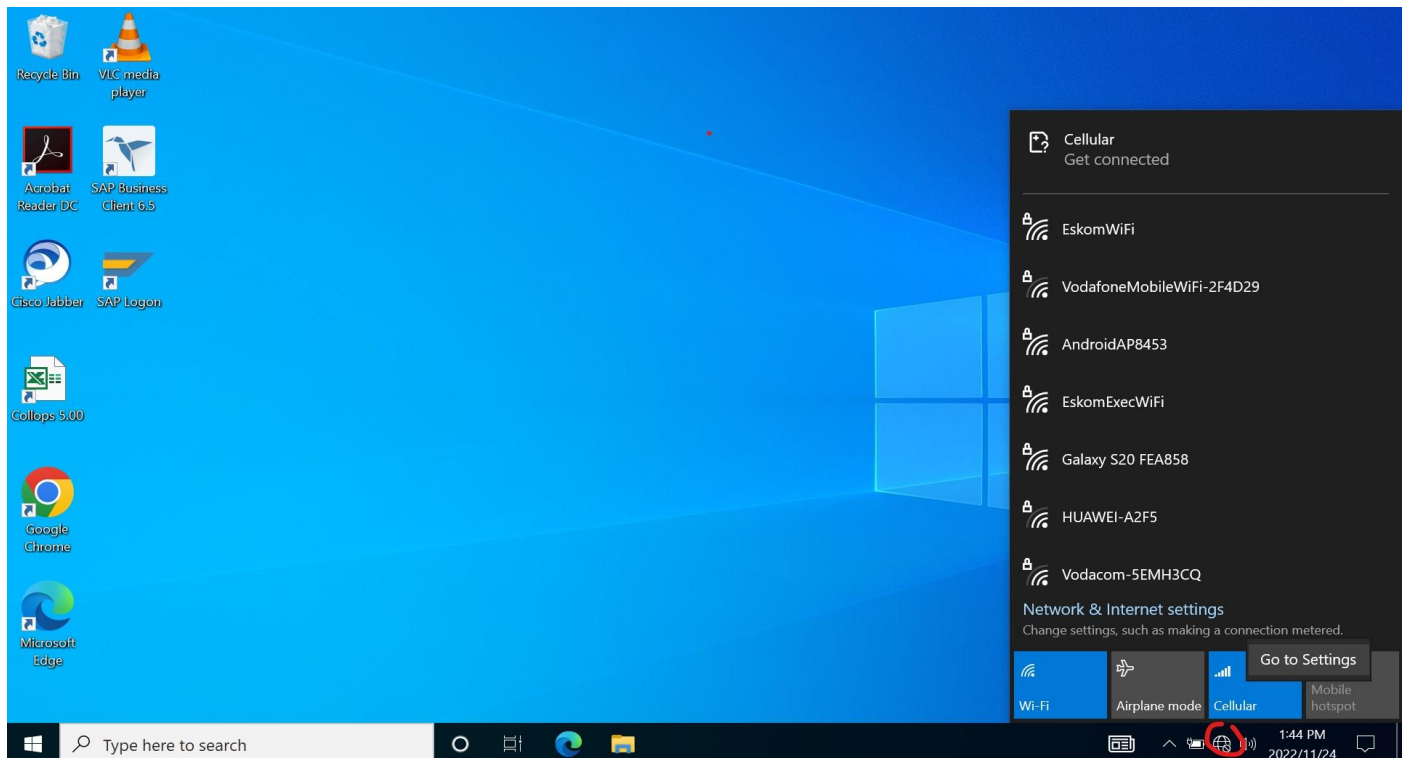

Step 2

Restart your laptop

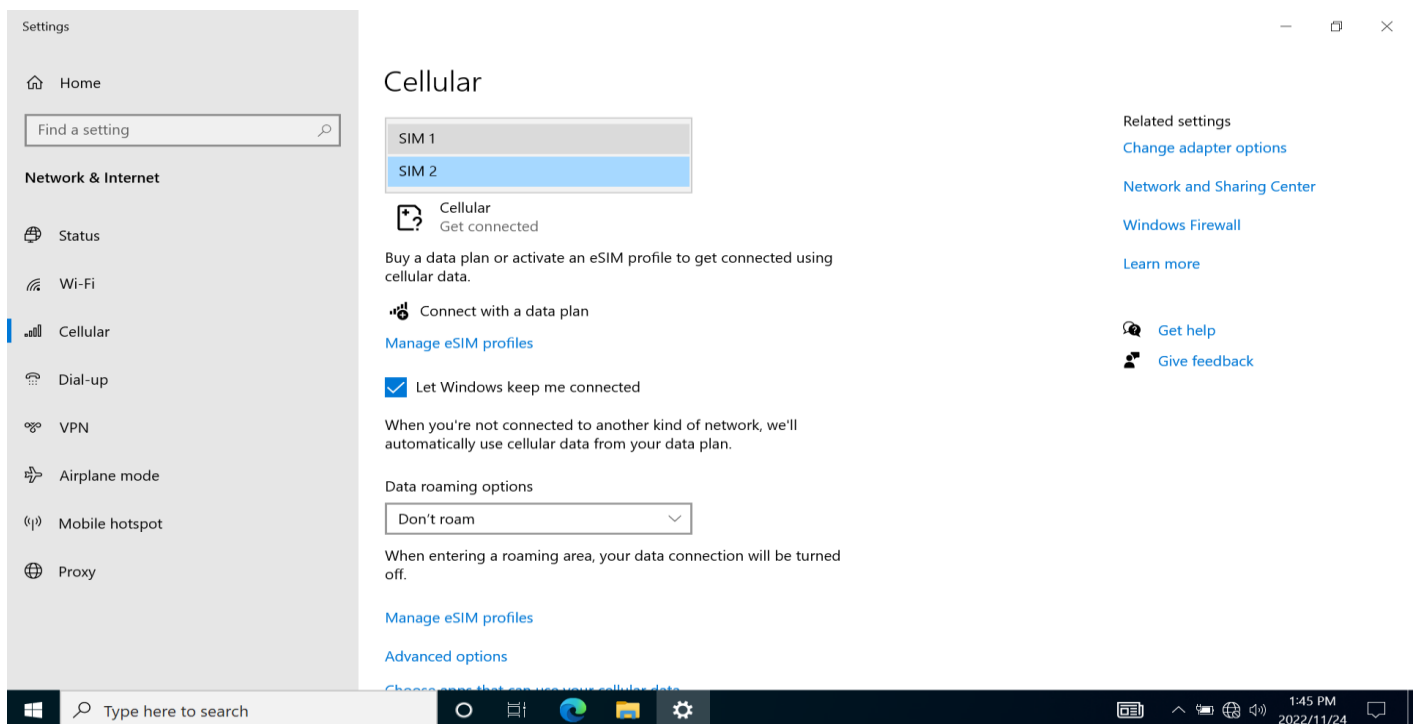

Step 3

Login to your machine and go to world icon or Wi-Fi icon, move the cursor to the cellular option and right click, click on “go to settings”.

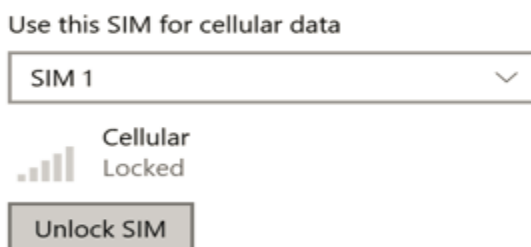

On the drop down select SIM 1

Step 4

Click Unlock SIM and put in the four digits pin from sim card holder and click next.

Use this SIM for cellular data

SIM 1

Cellular
Locked

Enter your PIN to unlock the device and connect to the network

Tries left: 3

••••

Next Cancel

Step 5

APN

Profile name
Eskom

APN
Eskom1

User name
User name

Password
Password

Type of sign-in info
None

IP type
Default

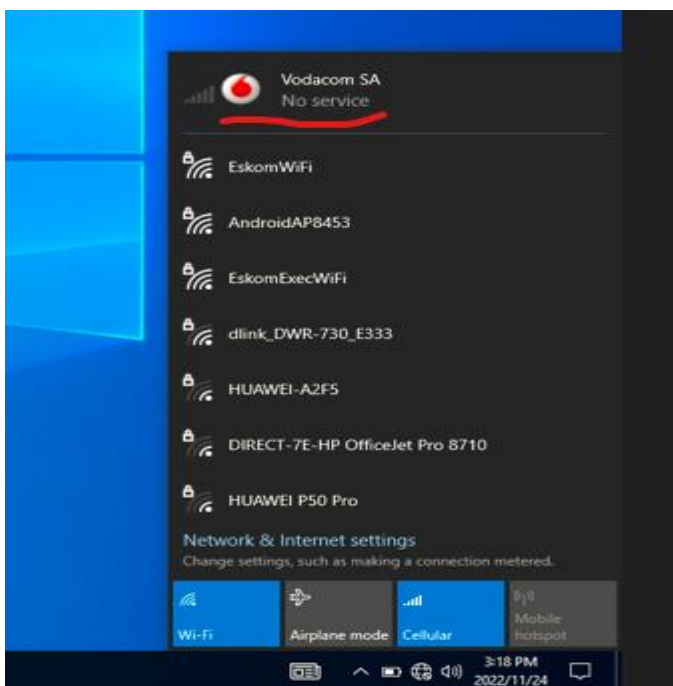

APN type
Internet

☒ Apply this profile

Save

If the sim card is not activated, it will display “No service”

You must contact technician on side to assist you with the email to activate the sim card.

Steps 7

If the sim card is activated, there will be a running bar at bottom right side wait for the bar to finish when it's done (100%) restart the machine.

Steps 8

Login to the machine go again to the world or Wi-Fi icon click on the sim to unlock the sim card again put in the four pin digits, check the box "connect automatically" and click next. Wait until it displays connected.

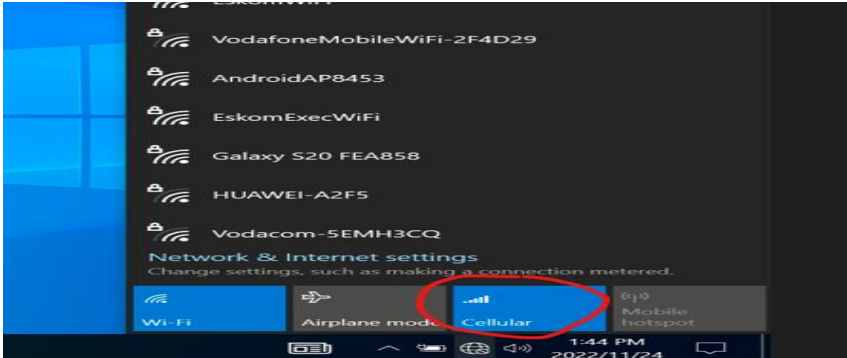

Conclusion (Optional):

Remember to login to VPN when using the 3G card network to access Eskom domain.

And the cellular option must always display blue.
